Samoa

The Islands of Samoa (pronounced Saaah-Moah) are located halfway between New Zealand and Hawaii and East of the International Dateline.

Samoa is comprised of 10 islands, of which Savaii and Upolu are the largest. The 8 smaller islands include; Apolima, Fanuatapu, Manono, Namua, Nuulopa, Nuulua, Nuusafee and Nuutele. The country's capital of Apia and Faleolo International Airport are both located on the main island of Upolu.

Diving in Samoa offers something special for both the novice and the experienced diver. The islands are blessed with a rich marine life and the surrounding reefs are home to some 900 fish species including including anemone, rays, trevally, napoleon, tuna, barracuda, snapper, wrasse, grouper, butterfly fish, angel fish, spade fish, giant clams, morays, turtles and reef sharks.

There are more than 200 varieties of coral, as well as various swim throughs and tunnels to explore. The warm clear waters provide excellent visibility of between 15 and 50 metres and temperatures ranging from 25° to 30°C.

For Advanced and adventurous divers, much of the reef remains unexplored and there is the potential to discover brand new dive sites in the area.
